ABSTRACT

In the spring of 1983, Chicago elementary school students, grades 1-8, were administered the Iowa Tests of Basic Skills (ITBS), Form 7. Students in grades six and eight were also given tests in science, social studies, and language skills. This report on the new testing program consists of an overview of citywide test results, district summaries, and individual school reports. 1982 results, adjusted to reflect new norms, are given to show comparisons of IBTS scores for 1982 and 1983. The overview contains ITBS score comparisons of Chicago and national test results, using 1983 baseline data by grade. Test scores and school characteristic data are given for each of the 20 administrative districts and for each school. School characteristics include school type, total budget allocation, number of teachers, school membership, student attendance rate, percentage of low-income students, percentage of limited-English-proficient students, student racial/ethnic composition, and special programs. The new testing program provides more comprehensive information on the total student population. 1983 median scores for reading and mathematics at almost all grade levels are closer to national norms than previous results. Appendix includes a glossary of terms and an alphabetical listing of schools. (BS)

FOREWORD

Assessment of student progress is an important part of the instructional process. Teachers, administrators, and the general public need achievement information to make informed and appropriate decisions. 1982-1983 Test Scores and Selected School Characteristics summarizes citywide and individual school test results, providing a context in which to make these decisions.

This year, after extensive study, field testing, and consultation, we have adopted a new elementary testing program. The new elementary test is the Iowa Tests of Basic Skills (ITBS), Form 7, which has up-to-date norms and items that are more consistent with our curriculum than the previous test, ITBS, Form 6. Along with the adoption of the new test, we have made a number of modifications in our elementary testing program:

- All students in grade one were tested for the first time this year. Students in grades one through eight were given the basic battery consisting of five subtest areas--Reading Comprehension, Vocabulary, Mathematics Concepts, Mathematics Problem Solving, and Mathematics Computation.

- The Mathematics Computation subtest is new this year.

- This year, for the first time since the early '70s, the Science, Social Studies, and Language Skills subtests were administered to sixth and eighth grade students.

- The scores of certain categories of special education and limited-English-proficient students not previously included are reported this year.

In our continuing effort to provide information in a format which permits greater insights into our school system, this year's book incorporates a number of new features:

- All data for an individual school appear on a single page with one school per page.

- District summary data are presented in the same format as the school data to facilitate making comparisons within and across districts.

- School characteristics related to staffing and school expenditures have been added to the individual school summary.

Since this is the first year of the new testing program, the 1983 results will serve as baseline data for future years. The comprehensive nature of this report will help to discover trends and note progress and improvement in the school system.

EXECUTIVE SUMMARY

In the spring of 1983, elementary school students, grades one through eight, were administered the Iowa Tests of Basic Skills, Form 7. The test consists of five subtests--Reading Comprehension, Vocabulary, Mathematics Concepts, Mathematics Problem Solving, and Mathematics Computation. In addition, students in grades six and eight were given tests in science, social studies, and language skills.

Since this is a new testing program, various adjustments had to be made so that results could be compared with the prior year. After these adjustments, the results show that the median scores for elementary school students at most grade levels are higher than they were last year in both reading and mathematics.

- Median Reading Comprehension scores increased for five of seven grade levels, remained the same for grade five, and declined by one month for grade two.
- Median scores on the Vocabulary subtest are higher in the intermediate and upper grades, remained the same at the third grade, but declined by two months at second grade.
- The Mathematics Concepts median scores increased at six of seven grade levels and remained the same in one.
- The Mathematics Problem Solving median scores are higher in four of seven grade levels, remained the same at grade four, and declined by one month at two grade levels.
- The scores for the first quartile indicate that, in general, slower developing students made considerable progress over the previous year in all subtest areas. Results for faster developing students, however, are mixed. When third quartile scores on all subtests are examined, only 12 of 28 possible comparisons between 1983 and 1982 are higher this year than last. In contrast, 20 medians and 22 first quartile scores are higher this year.

With the implementation of a new testing program, it is now feasible to provide more comprehensive information about the total student population. Consequently, the new baseline data for this year include more special education and limited-English-proficient students than in previous years (see Glossary for details). The baseline data indicate that median scores at almost all grade levels are considerably closer to national norms than previous results had indicated.

- In Reading Comprehension, our median is only six months below national norms in the upper grades, seven months below in the intermediate grades, and one to three months below in the primary grades. This is a considerable increase over the scores that were reported last year based on the old norms.

- On the Vocabulary subtest, the median score for first grade is one month below national norms; median scores for the second and third grades are four to six months below grade level. In the intermediate and upper grades, median scores are eight to ten months below national norms.

- On the Mathematics Concepts and Problem Solving subtests, Chicago Public School students scored one to five months below national norms. In Mathematics Computation, a new subtest this year, median scores at grades two through seven are at or above grade level and one month below national norms at grades one and eight.

- The Science, Social Studies, and Language Skills subtests were administered to sixth and eighth grade students. The results show that in Language Skills both grade levels are eight months below national norms. In Social Studies, sixth and eighth graders are approximately a year below grade level. In Science, the median score for sixth grade is nine months below grade level but a year and a half below national norms at the eighth grade.

Many factors contributed to the increase in scores at the elementary school. Additional analyses are needed to determine the impact of specific programs and innovations on student achievement. The list of factors for further study should include the following continuing programs: School Action Plans, Mastery Learning Program, Equal Educational Opportunity Programs, the Adopt-A-School Program, and the promotion policy. During the 1982-83 school year the following new programs and activities designed to strengthen the instructional program were initiated: Incentive Grants to 433 elementary teachers and principals, the restructuring of the elementary mathematics curriculum, the implementation of ECIA Chapters 1 and 2 and State Title I programs, and the Chicago Education Corps. In addition, student attendance during the 1982-83 school year continued to improve. This year, the attendance rate for elementary school students was 93 percent compared to 92.1 percent for the 1981-82 school year.

This year's scores are very encouraging. As a result of the progress made this year and the use of current norms, median scores for reading and mathematics at almost all grade levels are considerably closer to national norms than previous results had indicated. If the goal of reaching national norms is to be realized, efforts need to be continued in all areas. In particular, the data suggest focusing on strategies for improving the achievement of faster developing students and second graders, as well as strengthening programs in the areas of vocabulary and language skills development, social studies, and science.

OVERVIEW OF ELEMENTARY CITYWIDE TESTING RESULTS

COMPARISON OF SCORES ON THE IOWA TESTS OF BASIC SKILLS FOR 1982 AND 1983

DISCUSSION OF TABLE I

Table I on page 5 presents the grade-equivalent scores by grade on the Iowa Tests of Basic Skills. Scores are reported for each grade for both 1982 (ITBS, Form 6) and 1983 (ITBS, Form 7) in four subtest areas--Reading Comprehension, Vocabulary, Mathematics Concepts, and Mathematics Problem Solving. This table shows the citywide scores at the median and at the first and third quartiles. (See Glossary for an explanation of quartiles and median.)

The 1982 grade-equivalent scores reported in Table I are somewhat different from the grade-equivalent scores reported in the 1982 Test Scores and Selected School Characteristics. The data reported in 1982 were based on norms established in 1971; 1982 results reported in Table I were adjusted to the norms used for the 1983 test. This adjustment in the 1982 scores is based on tables provided by the publisher and permits a comparison between the 1982 and 1983 results. In keeping with past practices, the data presented in Table I do not include test results for limited-English-proficient or special education students so that similar populations can be compared. (To provide more comprehensive information about the total school population, new baseline data, reported in Table II, include results for selected categories of limited-English-speaking and special education students.) The data presented in Table I are also shown in the bar graphs which follow.

When students' scores for 1983 are compared with those of students who were in the same grade in 1982, the results indicate that in most instances, students in the Chicago Public Schools scored higher in both reading and mathematics in 1983 as compared to 1982.

- Median Reading Comprehension scores increased for five of seven grade levels, remained the same for grade five, and declined by one month for grade two.

- In Vocabulary, the median scores for intermediate and upper grade students were higher than the previous year. The median Vocabulary score remained the same for third grade but was two months lower for second grade.

- Median scores on the Mathematics Concepts subtest were higher for six of seven grade levels, increasing by as much as six months at grade six. The median for second grade students remained the same; at both the second and sixth grades, the median scores were at national norms.

- In Mathematics Problem Solving, median scores increased for four of seven grade levels, remained the same at grade four, and declined by one month at two grade levels.

- The scores for the first quartile indicate that, in general, slower developing students made considerable progress in all subtest areas. First quartile scores for intermediate and upper grade students increased substantially over the previous year.

- Results for faster developing students are mixed. When the third quartile scores on all subtests are examined, only 12 of 28 possible comparisons between 1983 and 1982 are higher this year than last. In contrast, 20 medians and 22 first quartile scores were higher this year than last.

The results thus presented show that, at most grade levels, students this year did better than students in the same grades last year. The scores indicate that the average and slower developing students made considerable progress over the previous year; the data also suggest focusing on strategies for improving the achievement of faster developing students and second graders.

TABLE I

COMPARISON OF SCORES ON THE IOWA TESTS OF BASIC SKILLS FOR 1982 AND 1983
GRADE EQUIVALENTS BY GRADE

		1982 Grade Equivalents			1983 Grade Equivalents		
	Grade Level	First Quartile	Median	Third Quartile	First Quartile	Median	Third Quartile
Reading Comprehension	2	2.0	2.6	3.5	2.0	2.5	3.2
	3	2.6	3.4	4.2	2.8	3.5	4.2
	4	3.3	4.1	5.2	3.4	4.3	5.1

1983 BASELINE DATA BY GRADE
IOWA TESTS OF BASIC SKILLS, FORM 7
DISCUSSION OF TABLE II

Table II on page 13 presents the data that will serve as new baseline data for future comparisons. The median, first, and third quartile scores are presented by grade for the spring 1983 results of the Iowa Tests of Basic Skills, Form 7. In contrast to previous years, the scores of selected categories of limited-English-proficient and special education students are included. (See Glossary for details.)

This year's results in reading and mathematics are encouraging. For the first time in recent years, median scores approached national norms. For example, last year the Reading Comprehension median for eighth grade was reported as over a year below national norms; this year's median was six months below national norms. In Mathematics Computation, medians for six of eight grade levels were at or above national norms. On the other two mathematics subtests, median scores were one to five months below national norms.

- In Reading Comprehension, the median for first grade students was one month below national norms; second and third grade students were three months below national norms; intermediate grade students scored seven months below national norms; upper grade students scored six months below national norms.

- In Vocabulary, the median score for first grade was one month below national norms; second and third grade students scored four and six months below national norms. Medians for intermediate grade students were eight to nine months below national norms; upper grade students scored nine to ten months below grade level.

- Median Mathematics Concepts scores ranged from two to four months below national norms. First and second grade students were two months below national norms; third grade and fourth grade students scored three months below grade level. Median scores for fifth through eighth grade students were two to four months below grade level.

- Median Mathematics Problem Solving scores indicate that students in the primary grades scored one to three months below grade level; the median scores for intermediate grade students were four to five months below national norms; upper grade students scored two to three months below national norms.

- In six of eight grade levels, median scores for Mathematics Computation were at or above grade level. First and eighth grade students scored one month below national norms; second and third grade students scored at national norms. Median scores for fourth and fifth grade students were one month above national norms; sixth and seventh grade students scored two months above grade level.

The Science, Social Studies and Language Skills subtests were administered to sixth and eighth grade students. The results indicate the following:

- In Science, the median score for sixth grade students was nine months below national norms; however, eighth grade students scored one year five months below grade level.
- In Social Studies, the median score for sixth grade was one year below grade level and nine months below national norms for eighth grade students.
- The Language Skills medians for sixth and eighth grade students were both eight months below national norms.

As stated earlier, this year's results in Reading Comprehension and in mathematics are encouraging; however, the scores indicate that there is a need to review the instructional program provided to second grade students and to reassess vocabulary development at all grade levels. At the sixth and eighth grade levels, the instructional programs in science, social studies, and language skills need to be intensified.

TABLE II

1983 BASELINE DATA BY GRADE - IOWA TESTS OF BASIC SKILLS, FORM 7

		1983 Grade Equivalents			National Norm
	Grade Level	First Quartile	Median	Third Quartile	Median
Reading Comprehension	1	1.2	1.7	2.2	1.8

DISTRICT SUMMARIES AND INDIVIDUAL SCHOOL REPORTS

INTRODUCTION

Chicago public schools have been organized into 20 administrative districts (see map on the following page). Information on this section of the report is presently separated for each district; an alphabetical list of schools and their district numbers is given in the Appendix. Each district's section begins with a map and a summary page. Schools within a district are presented alphabetically, with the exception of branches, which immediately follow their main schools. Data are provided for regular elementary schools and Educational and Vocational Guidance Centers (E.V.G.C.s).

Two different types of data are presented for each school and for each district: test scores and school characteristics data. The test scores include 1983 grade-equivalent scores for each subtest and each grade where valid reading scores are reported for at least 11 students (see Glossary). Similar data for 1982 have been obtained by adjusting 1982 scores to reflect new norms and the inclusion of those categories of special education or limited-English-proficient students who would be included in 1983 baseline data (see Glossary for a description of those categories). It should be noted that 1982 test scores were not reported for first or pre-second graders and that several subtests are being reported for the first time. These include Mathematics Computation for all grades, and Science, Social Studies, and Language Skills for grades six and eight.

Data from 1982 are presented primarily for the purpose of spotting general trends. The reader is cautioned against making strict comparisons between 1982 and 1983 data, since they are based on different tests and norming populations. Comparisons between 1982 and 1983 Mathematics Total scores are particularly difficult to make, since the 1983 scores reflect the new Mathematics Computation subtest, as well as the Mathematics Concepts and Problem Solving subtests, which were averaged to calculate the 1982 Mathematics Total scores.

School characteristics data provide a context for the interpretation of test results. The data include school type, total budget allocation, supplementary State Title I funds allocated, number of teachers, school membership, student attendance rate, percentage of low-income students, stability, percentage of limited-English-proficient students, student racial/ethnic composition, and special programs (definitions of these terms follows). District-wide data are based on the schools reported in this book. For example, the district budget allocations represent the sums of the individual school allocations, and the number of teaching positions for the district is computed similarly.

ADMINISTRATIVE DISTRICTS

DEFINITIONS OF ELEMENTARY SCHOOL CHARACTERISTICS

	DESCRIPTION	SOURCE OF INFORMATION
CITYWIDE TEST RESULTS	The test results of the 1982 and 1983 citywide testing program (Iowa Tests of Basic Skills). Elementary scores are for grades 1 through 8 (See Glossary - Iowa Tests of Basic Skills).	From 1982 and 1983 Spring testing by the Bureau of Citywide Testing, Department of Research and Evaluation
TYPE	The lowest and highest grade levels in the school. Abbreviations used in this column are "K" for kindergarten, "Pk" for prekindergarten and a numeral for the grade level above kindergarten.	From the 1982-1983 Chicago Public Schools Directory, District Offices or test results
TOTAL BUDGET ALLOCATION	The sum of the operating budget and categorical funds.	"Plan for the Improvement of Instruction for Disadvantaged Students in the Chicago Public Schools," as revised December 21, 1982
SUPPLEMENTARY STATE TITLE I FUNDS ALLOCATED	Supplementary funds distributed to schools under State of Illinois Title I legislation in accordance with the "Plan for the Improvement of Instruction for Disadvantaged Students in the Chicago Public Schools"	"Plan for the Improvement of Instruction for Disadvantaged Students in the Chicago Public Schools, School-by-School Distribution of Programs and Appropriations," as revised December 21, 1982
# OF TEACHERS	Total number of teacher-certified staff for which the school is the attendance reporting unit. Teacher-certified staff who are half time in a school are counted as if they are full time. The principal is not included in this number.	From "Racial/Ethnic Survey Survey--Staff" as of October 31, 1982 reported by the Bureau of Administrative Research

DEFINITIONS OF ELEMENTARY SCHOOL CHARACTERISTICS

	DESCRIPTION	SOURCE OF INFORMATION
MEMBERSHIP	Number of pupils in prekindergarten and kindergarten, in grades one through eight, and in special education classes	From April monthly school summaries as reported to the Bureau of Administrative Research
ATTENDANCE RATE	The total days of student attendance in the school year 1982-83 divided by the total number of days of student membership for the year.	From monthly school summaries as reported to the Bureau of Administrative Research
% LOW-INCOME	The percentage of school age children from low income families residing in the school's attendance area.	As reported in "Education Consolidation and Improvement Act Chapter 1 Application, Fiscal 1983," produced by the Department of Government Funded Programs
STABILITY	The number of pupils who remain enrolled during the school year 1982-1983 divided by the May 1982 membership figure	From data provided by the Department of Information Processing Services and compiled by the Department of Research and Evaluation
% LIMITED-ENGLISH-PROFICIENT	The number of pupils who are identified as having a native language other than English and who are rated as needing an instructional program in which the home language is used for a portion of the instruction.	Based on the 1982-1983 annual census of bilingual students reported by the Department of Multilingual Programs and the Department of Research and Evaluation
RACIAL/ETHNIC COMPOSITION	The number of students in each of the major racial/ethnic categories--white non-Hispanic; Black non-Hispanic; American Indian and Alaskan Native; Asian and Pacific Islander; and Hispanic--divided by the total membership of the school.	From "Racial/Ethnic Survey--Students" as of October 29, 1982 reported by the Bureau of Administrative Research

APPENDIX

GLOSSARY

ADJUSTED SCORES	The 1982 results (ITBS, Form 6), based on 1971 norms, were adjusted to reflect the equivalent 1983 (ITBS, Form 7) scores as indicated by the test publisher in the *1971-78 Norms Conversion Tables*. Adjusted scores permit longitudinal comparisons by removing the changes due solely to test and norms differences. In Reading Comprehension, for example, the median grade equivalent for fourth grade students was 4.2 using 1971 norms but was adjusted to 4.1 using 1978 norms; the median grade equivalent for eighth grade students using 1971 norms was 7.7 but became 8.1 using 1978 norms.
BASELINE POPULATION	Beginning in 1983, the citywide ITBS results include the scores of all students not in bilingual or special education programs plus the following groups of students receiving bilingual and special education services: limited-English-proficient students in instructional needs category C, plus those in category B who had been enrolled in the Chicago Public Schools for more than two years; special education students designated Behavior Disordered, Educationally Handicapped, EMH Transition, Hard of Hearing (testing is optional for ITBS levels 5-8), Other Health Impaired, Physically Handicapped, and Speech Impaired.
GRADE EQUIVALENT	A grade equivalent (GE) of a given raw score estimates the grade level at which the typical student achieves this raw score. The digit(s) to the left of the decimal represent the grade; the digit to the right of the decimal point represents the month within the grade. For example, 5.8 symbolizes the fifth grade and the eighth month of the school year.
INDIVIDUAL TESTING	Provisions for students whose developmental level differed substantially from grade level expectancies were based on the recommendations made by the test authors. Students' current performance in *Chicago Mastery Learning Reading* was used as an indicator of their developmental level.
IOWA TESTS OF BASIC SKILLS	The *Iowa Tests of Basic Skills* (ITBS), Form 7, is a multilevel, nationally normed, comprehensive achievement battery. For all grades, scores are reported for five subtests: Vocabulary, Reading Comprehension, Mathematics Concepts, Mathematics Problem Solving, and Mathematics Computation. Additionally, scores on the following subtests are reported for sixth and eighth grade students: Science, Social Studies, Spelling, Punctuation, Capitalization, and Usage.

GLOSSARY

MEDIAN	The median is the numeric value of the middle case below which 50 percent of the students score. The median is the score that has a percentile rank of 50. It is indicative of the progress of the average student.
NATIONAL NORMS	The national norms in grade equivalents are for the eighth month of the school year. For example, 2.8 is the national norm for second grade, 3.8 for third grade, etc.
PRE-SECOND GRADE	Children who do not meet the minimum mastery expectations specified for first grade in the Chicago Mastery Learning Reading Program are to be placed in a pre-second grade program.
NORM GROUP	The norm group is the sample from the national population from which the publisher set the test norms. The Iowa Tests of Basic Skills, Form 7, was normed in 1978.
QUARTILE (Q_1, Q_2, Q_3)	Quartiles are scores (points in a distribution) that divide a score distribution into quarters. The first quartile (Q_1) is the numeric value of the score below which 25 percent of the students score. It is indicative of the progress of the slower developing student. The second quartile is the median (Q_2). The third quartile (Q_3) represents the numeric value below which 75 percent of the students score. It is indicative of the progress of the faster developing student.
